Angio cpert - with automatic stand
Modern ergometer with multifunctional applications

Highlights

Easy to operate
For Lode products this means:
- easy to connect
- easy to move around
- easy user interface

Reliable and reproducible stress tests
The experience of professionals who calibrate many ergometers shows that the Lode ergometers are the most reliable across the complete workload and rpm range and still within specifications even after many years of intensive use.

High standards
Lode is a socially and environmentally responsible company. All Lode products are RoHS/WEE compliant and Lode is ISO 9001:2015, ISO and 13485:2016 certified. All medical products comply to MDD 93/42/EEC, incl. IEC 60601-1.

Additional features with PCU
Besides the possibility to program 24 protocols easily, this control unit offers the following features:
- better monitoring because of the additional and larger display
- a perfect combination with BPM
- possibility to measure SpO2

Multifunctional
The ergometer can be used for both arm and leg ergometry.
Angio cpet - with automatic stand

Modern ergometer with multifunctional applications

With the stand for the Angio, the ergometer can move up and down over a range of 140cm. With the stand it is easier to move your arm Ergometry setting to another room, because it can stand free. For heavy use during arm-ergometry it is possible to fixate the stand to the wall with the supplied parts. Together with the automatic stand the Angio becomes an ergometric unit that can be used for both arm and leg Ergometry (this setting is standard supplied with handcurbles). Its compact design makes it universally applicable for ergometric studies in those sectors in which standard ergometry cannot be used. The Angio operates independent of pedaling speed in the range of 7 - 1000 watt. The Angio cpet is standard supplied with a communication module and can therefor be easily controlled by all known stress ECG and pulmonary devices in the world. The workload, rpm and time can be readout from the 3,5" colour display.

Features

Small adjustment steps
The workload of the Lode ergometers is adjustable in steps of only 1 watt. Depending on your wishes, the test operator or the test subject can adjust the workload. The steps of 1 watt are possible in the manual mode as well as within protocols.

Extreme low start-up load
The extreme low start-up load of 7 watts and the adjustability in small steps of 1 watt make this ergometer perfectly suitable for many different applications. The standard control unit shows multiple ergometry parameters and you can determine your specific default setting and start-up menu.

Accurate over a long period of time
The Lode ergometers are supplied with an electro-magnetic braking mechanism of Lanooy (eddy current). The biggest advantage of this braking system compared to a friction braking system is the absolute accuracy and the accuracy over time. Moreover, friction braking systems have more wearing parts.

LEM compatible
This product can be used with Lode Ergometry Manager (LEM) software to manage data and to apply specific protocols when a Communication card or Network card is present.

LCRM compatible
This product can be used with Lode Cardiac Rehabilitation Manager software (LCRM)

Customer specific display setting
Display settings are adjustable according to your specific requirements: each individual has its specific wishes about the parameters to be displayed. This can easily be adjusted with the Lode ergometers.

Versatile Interfacing
Various interface protocols guarantee perfect communication with all commonly known stress ECG and spirometry equipment.

## Workload
- **Minimum load**: 7 W
- **Maximum peak load**: 1000 W
- **Minimum load increments**: 1 W
- **Maximum continuous load**: 750 W
- **Hyperbolic workload control**: ✔
- **Maximum rpm independent constant load**: 150 rpm
- **Minimum rpm independent constant load**: 30 rpm
- **Electromagnetic "eddy current" braking system**: ✔
- **Dynamic calibration**: ✔

## Accuracy
- **Workload accuracy from 7 to 100 W**: 3 W
- **Workload accuracy from 100 to 500 W**: 3%
- **Workload accuracy from 500 to 1000 W**: 5%

## Comfort
- **Adjustability range height**: 1400 mm

## User Interface
- **Readout Distance**: ✔
- **Readout RPM**: ✔
- **Readout Heart rate**: ✔
- **Readout target HR**: ✔
- **Readout Energy**: ✔
- **Readout Torque**: ✔
- **Readout Time**: ✔
- **Readout Power**: ✔
- **Set Display**: ✔
- **Set Resistance**: ✔
- **Set P-Slope**: ✔
- **Set Mode**: ✔
- **Manual operation mode**: ✔
- **Preset protocol operation mode**: ✔
- **Terminal operation mode**: ✔
- **External control unit**: ✔
- **Selfdesigned protocol operation mode**: ✔

## Dimensions
- **Product length (cm)**: 84 cm
- **Product width (cm)**: 82 cm
- **Product height**: 223 cm
- **Product weight**: 95 kg
- **Width between stand**: 67 cm
